**Be UV aware Extract from Cancer Council Australia** Be extra cautious in the middle of the day when UV levels are most intense. The SunSmart UV Index tells you the time period in which you need to be SunSmart. It is on the weather page of most daily newspapers. Check your skin regularly and see a doctor if you notice any unusual skin changes.

If you have a lesion that doesn't heal or a mole that has suddenly appeared, changed in size, thickness, shape, color or has started to bleed, see your doctor immediately. Treatment is more likely to be successful if skin cancer is discovered early.
